

Transforming Enterprises with Intelligent Digital Solutions

About us.

6e Technologies is a technology solutions provider that understands the challenges faced in today's rapidly evolving tech landscape. We specialize in ERP, analytics, automation, cloud infrastructure, and identity security, tailoring our strategies to address the specific demands of businesses operating in cloud, on-premise, and hybrid environments. Our solutions are designed to align with your organization's technological goals and drive innovation.

Cloud / On-Premise / Hybrid

The enterprises we work with don't just end up with better technology.

They end up operating differently

- Decisions are made faster because the data is available.
- Finance teams close the books in days instead of weeks.
- IT stops reacting and starts getting ahead of problems.
- Leadership has the visibility to plan with confidence instead of hope.

Why Enterprises Choose Us

- Deep Oracle expertise, not generalist consulting.
- Transparent execution and accountable delivery.
- Secure, scalable, and well-governed solutions
- Flexible engagement and managed service models

How We Engage

- Project-based implementations
- Ongoing managed services and support
- Hybrid delivery with strong onshore leadership
- Scalable teams aligned to business demand

Our Core Capabilities

Enterprise Applications (ERP)

Your ERP should work for your business, not against it.

Organisations with disconnected systems spend up to 30% more time on workarounds than those on modernised platforms. That's the time your team doesn't have.

We deliver Oracle Cloud ERP, SCM, HCM, and EPM implementations, E-Business Suite upgrades and modernisation, and integrations with cloud and third-party platforms, all built to reduce complexity and keep your operations moving.

BI & Data Analytics

If your data lacks reliability, it hinders decision-making rather than facilitating it.

Organizations that utilize integrated analytics complete their reporting cycles ****40–60% faster**** than those that manually compile data. We create unified analytics platforms that span ERP, cloud, and operational systems, complete with executive dashboards and AI-driven insights. This empowers your team to act quickly and make informed decisions with confidence.

Agentic AI and RPA

Your most significant expense might stem from a process that hasn't been examined in years.

Research indicates that teams may spend 20–40% of their time on tasks that could be automated. Think about leveraging Robotic Process Automation (RPA), intelligent workflows, and process automation, in conjunction with ERP, CRM, and other finance automation tools.

Managed Services & IT Support

Mission-critical systems cannot afford to experience downtime. Unexpected outages can cost enterprises tens of thousands of dollars per hour.

Our Managed Services & IT Support ensure uptime and reliability by proactively identifying and resolving issues. With expert support, your team can focus on strategic initiatives while we handle technical challenges. Tailored solutions meet your needs, maintain business continuity, and support operational goals.

Our Core Capabilities

Identity & Access Management

One access gap can undo everything else you've built.

The majority of enterprise breaches stem from compromised credentials or excessive access rights. Consider implementing a Single Sign-On (SSO) strategy, integrating Okta, and leveraging managed services and secure identity lifecycle management to enhance your security posture.

Cloud Infrastructure & Modernization

The cloud should create advantage, not complexity.

Without a well-defined strategy, many cloud migrations end up being more expensive within 18 months. Focus on cloud migrations, hybrid strategies, Oracle Cloud Infrastructure (OCI) implementations, and optimizing costs and performance.

Let's talk about what's actually getting in your way

Most of the conversations we have with new clients start the same way, not with a technology question, but with a business problem that's been sitting too long without a real answer.

We're ready for that conversation.
